New product names

SS-Pålen® will become S-Driven® and
SSdr-Pålen® will become S-Drilled®

26.10.01

Information Regarding Updated Product Names

As part of Scandia Steel's ongoing development and harmonization of its product portfolio, the product names of our steel pipe pile systems are being updated.

Effective 1 October 2026, the following name changes will apply:

- SS-Pålen® will become S-Driven®
- SSdr-Pålen® will become S-Drilled®

These name changes do not affect the products' design, dimensions, technical performance, intended use, certifications, or applicable technical approvals. The products continue to be manufactured and supplied according to the same specifications and quality requirements as before.

During a transition period, both the previous and new product names may appear in:

- Technical documentation
- Design specifications
- Drawings
- Project documents
- Certifications
- Product catalogues

To facilitate identification, earlier product names may be referenced alongside the new product names in selected documentation.

New Product Name	Previous Product Name
S-Driven®	SS-Pålen®
S-Drilled®	SSdr-Pålen®

S-Driven® and S-Drilled® represent the same proven pile systems previously marketed as SS-Pålen® and SSdr-Pålen®. Only the product names have changed.

For questions regarding the name changes or references in existing project documentation, please contact Scandia Steel.
